

Hackathon Day:1

Marketplace Builder

Date: _____

General E-Commerce

Primary purpose:-

To build an online marketplace specializing in premium, ready-made furniture for homes and offices. The platform will offer a wide range of furniture styles and categories, ensuring convenience, affordability, and customization options for customers.

Unique Selling Point:-

The marketplace will stand out by offering AI-powered furniture recommendations, personalized based on room dimensions and design preferences, helping customers select the ideal pieces for their spaces.

Set Your Business Goals:

1. What problem does your market place aim to solve?
- Eliminate the need to visit numerous furniture showrooms by providing a one-stop online solution.
 - Solve the challenge of selecting furniture that matches specific room dimensions,

design preferences, and budget requirements.
Who is your target audience?

Primary Audience: Homeowners, office managers, and interior designers looking for ready-made furniture.

Secondary Audience: Young professionals and families in search of stylish and affordable furniture options.

What products or services will you offer?

• Products:

- Living Room: Sofas, coffee tables, TV stands
- Bedroom: Beds, wardrobes, dressers
- Dining Room: Dining tables, chairs, cabinets
- Office: Desks, ergonomic chairs, bookshelves
- Outdoor: Patio furniture, garden chairs
- Accessories: Lamps, rugs, cushions, decor items

• Services:

- Room-Based Recommendation: Personalized suggestions for furniture based on room type and size.
- Customization Options: Limited customization (e.g., choice of fabric or wood color).
- Assembly Assistance: Partnered services for assembling furniture at delivery.
- AR-Based Room Visualization (Future Feature): Enable customers to visualize

Date _____

how furniture fits in their rooms.

4: What will set your marketplace apart?

- Variety: A wide selection of furniture styles (modern, vintage, minimalist, etc.).
- Affordability: Competitive pricing along with regular promotions and discounts.
- Sustainability: Focus on eco-friendly furniture made from sustainable materials.
- Convenience: Easy returns, flexible payment options, and efficient delivery with live tracking.

Create a Data Schema
Entities and Attributes:

- Products:
 - Product ID
 - Name
 - Description
 - Price
 - Stock Availability
 - Category (e.g., ~~Wood~~ Metal Living Room, Bedroom, Office)
 - Material (e.g., Wood, Metal, Fabric)
 - Dimensions (Height, Width, Depth)
 - Weight
 - Images

Tags (e.g., "Eco-Friendly," "Modest")

Orders:

- Order ID
- Customer ID
- Product List (Product ID, Quantity)
- Total Price
- Order Status (Pending, Shipped, Delivered)
- Payment Method
- Timestamps (Order Date, Expected Delivery Date)

Customers:

- Customer ID
- Name
- Email
- Address
- Contact Number
- Order History
- Preferences (e.g., style, material preferences)

Shipments:

- Shipment ID
 - Order ID
 - Delivery Address
 - Shipment Status
 - Courier Service
 - Expected Delivery Date
- ### Delivery Zones:
- Zone ID

- Area Name
- Coverage (Cities or Regions)
- Customization Requests (New Entity):
 - Customization ID
 - Product ID
 - Customer ID
 - Requested Changes (e.g., wood type, fabric color)
 - Status (Pending, Approved, Completed)
- Relationships Between Entities:
 - Products are linked to Order via Product ID.
 - Orders are connected to Customers through Customer ID.
 - Orders are associated with Shipments via Order ID.
 - Customization Requests are linked to both Products and Customers.

Visual Schema

The relationships between entities are as follows:

Customers → Orders → Products → Shipments → Delivery Zones
Customers ↔ Customization Requests → Products

This design ensures smooth integration of product management, customer customization, and logistical operations.
